Statement on future of PACE in ArcGIS Desktop/ArcMap® and plans for PACE in ArcGISpro®

UKHSA RCE Radiation Assessments Department, 1/3/2024

Currently PACE is implemented as an add-in to ArcGIS desktop (also known as ArcMap) and does not work in the new ESRI product ArcGISpro.

ESRI have stated that ArcGIS 10.8 will be the last major release of ArcGIS desktop/ArcMap, and that the current version 10.8.2 will continue to be supported to until 1/3/2026. ESRI are encouraging users to migrate to ArcGISpro:

<https://support.esri.com/en-us/knowledge-base/arcmap-continued-support-000029721>

The current release of PACE is 4.0, the next release of PACE 4.1 is planned for Summer 2024, this is planned to be the last release of PACE in ArcGIS desktop/ArcMap. UKHSA are undertaking work to port PACE4.1 to ArcGISpro with a tentative release date around spring 2025, and with near identical functionality. PACE 4.1 in Desktop will continue to be supported for another year after the release to ArcGISpro.
