

Welcome to the Safer Imaging E-bulletin, which provides key updates and learning from the national incident learning system for clinical imaging, MRI and nuclear medicine.

Further information on the national incident learning system can be found [here](#) or accessed via the QR code.

This is the first publication of this series. Future bulletins will share results and learning from data analysis. Please share this [link](#) with colleagues and select the '*MEG Incident Learning System*' topic to subscribe for updates on further publications. We welcome your feedback and encourage you to share your thoughts with the team at meg.learningsystem@UKHSA.gov.uk. Your input helps us shape future publications.

Participating in the national incident learning system

Anonymised clinical imaging, MRI and nuclear medicine incident and near miss event reports can be submitted on a voluntary basis to the Medical Exposures Group (MEG) for national analysis and shared learning.

If your department is applying the national coding taxonomy, this data is eligible for submission to the national incident learning system. User guidance for the application of the national coding taxonomy is [available](#). Further information on how to submit data is available [here](#).

Save the date: UKHSA - Incident Learning System Workshop, 7th July 2026 in Birmingham

The Medical Exposures Group are delighted to announce a face to face workshop to support you with the application of the national coding taxonomy for clinical imaging, MRI and nuclear medicine and to learn how this can be used in local analysis.

Registration is free of charge. Booking is essential as spaces are limited. To register please contact the team at meg.learningsystem@UKHSA.gov.uk. Further information on the venue and programme will become available shortly on the [MEG incident learning webpage](#).
